Effective mechanical weed control requires compatibility among the crop, the soil, seedbed preparation technique and cultivation equipment. As you plant, so shall you cultivate: use row spacings that will accommodate your equipment with a minimum of adjustment.

Key Factors in Vegetable Production | Vegetable Resources Water is the life-blood of vegetable production. Vegetable crops generally require more total water and more frequent irrigation than most other agronomic crops. Few vegetables can be grown successfully under dryland conditions in most areas of Texas. Vegetable growing | Vegetable growing and management ... Climate and climatic variability is a critical factor in vegetable production and is largely beyond your control, unless you plan to establish protected cropping such as glasshouse or shade-house production. Managing Pests | Vegetable Resources Cultivation is perhaps the oldest method of weed control practiced by man. It still is one of the most effective and economical means of weed control. Although the concept of cultivation has not changed over time, implements used to cultivate have undergone considerable improvement. There are many excellent cultivating implements available today.

Vegetable - Wikipedia Whatever system is used for growing crops, cultivation follows a similar pattern; preparation of the soil by loosening it, removing or burying weeds, and adding organic manures or fertilisers; sowing seeds or planting young plants; tending the crop while it grows to reduce weed competition, control pests, and provide sufficient water; harvesting the crop when it is ready; sorting, storing, and marketing the crop or eating it fresh from the ground.
